Markup language AutoCAD offers the ability to use a number of scripting languages to create Markup Language (MCL). Python The AutoCAD MCL for Python (pyMCL) allows programmatic creation and updating of objects and blocks in a file. pyMCL is available for download through AutoCAD's Application Programming Interface (API), and has been included in AutoCAD since 2006. AutoCAD's native ObjectARX language has been extended by third parties such as IIm Importer, ObjectARX to allow custom scripting to be embedded within their import tool. AutoCAD's VBA language includes a class library called ManagedCAD.NET that allows Microsoft.NET applications to integrate with AutoCAD and Visual Basic for Applications (VBA). AutoCAD's VBA library (ManagedCAD.Net), however, can be used to make customizations to most parts of AutoCAD. File types DWG The AutoCAD DWG (dynamic graphics) format is the native graphics format for AutoCAD. It is a proprietary file format, but a number of file conversion tools are available for the Macintosh and Windows operating systems. AutoCAD's native file format also supports the ability to import and export. It is based on the DGN, but contains a number of additional features. The DWG file can be saved in several file formats, including PostScript, PDF, CDR, HLP, EPS, ETA, DSP, and BMP. DGN The AutoCAD DGN (dynamic graph) format is the native graphics format for AutoCAD. It is a proprietary file format, but a number of file conversion tools are available for the Macintosh and Windows operating systems. The DGN format was introduced in 1987, and is a predecessor of the newer DWG format. The DGN format is still used by AutoCAD and the other programs from the same software suite. The DGN format is based on the vector graphics format EPS. DAF AutoCAD's native file format is based on the Adobe Illustrator/InDesign Graphics Interchange Format. Vector formats The native AutoCAD file format is based on the DWG specification, which is compatible with the format used by other applications. The file format is based on the Vector format and is more compact ca3bfb1094
