Mixing color and black and white You can use Photoshop in multiple ways to manipulate your work. You can alter photos by just changing the color or adding black and white. If your image is in a monochrome color mode, you can easily bring it into a color mode by using Photoshop's Layer Mask feature. You can go from a color image to a black and white image with a layer mask. (Of course, a monochrome image can be made to appear a bit more colorful by using a black and white filter, but you can't add color back into a monochrome image. Choose the black and white filter first; then apply a color adjustment layer.) You must create a color adjustment layer to add color back into a monochrome image. Some beginners think that their work is in black and white because they think they can't use color filters like Hue/Saturation and Colorize to add color. However, Photoshop provides several ways to add color back into a monochrome image: Layer Mask: Layering is an excellent way to manipulate photographs, but sometimes you need to change the way the image appears on paper. This is where layer masks come in handy. When the mask is on, you can hide the layer you're working with and its contents. The result is that the layer that the mask is on (called a mask) will do the work and change the layer's contents. To create a mask, double-click the mask icon in the Layers palette. Double-clicking doesn't erase the layer, and it doesn't add the layer; you're simply adding a layer mask. The Layers palette changes and displays a grid on top of your image, as shown in Figure 6-14. To see more options, click the New Mask icon. **Figure 6-14:** You can add a layer mask to a layer or a selection. You can manipulate the mask to make colors appear, change the brightness or contrast, and so on. When you're done manipulating the mask and you're satisfied with the result, simply click the layer with

Anaesthesia and heart-lung transplantation. Heart-lung transplantation (HLT) is a complex operation to treat patients with chronic end-stage lung disease, who have no long-term alternative therapy. Heart-lung transplantation is similar to orthotopic heart transplantation. Anaesthesia for heart-lung transplantation involves the same principles as transplanted heart. Anaesthesia techniques used in heart transplantation may be applied to HLT. The timing of the procedure is also the same. The choice of anaesthetic agents, fluid balance, and transfusion are similar in both procedures. The post-transplant period is similar as well. The patient must be considered as a transplant recipient with liver failure and a major co-morbidity. The anaesthetist must be aware of fluid and electrolyte changes and renal preservation techniques to ensure haemodynamic stability during the early period after the operation.Occurrence of Pasteurella multocida in the probiotic of retail goat-milk products in Ilorin, Southwestern Nigeria. Numerous studies have shown that goats are reservoirs of Pasteurella multocida. The present study was carried out to ascertain the occurrence of this pathogen in goats and goat-milk products in Ilorin, Nigeria. A total of 322 goat-milk products of different brands and stores in Ilorin were collected in sterile petri-dishes containing 5% KCL at a temperature of 36 °C and examined for the presence of P. multocida by standard bacteriological methods. The results showed that 126 samples (38.8%) yielded culture-positive results with a frequency of 41.2% and 37.8% for packaged and unpacked goat-milk products, respectively. Based on this finding, it was concluded that goat-milk products may be a potential source of Pasteurella species.On Tuesday, five women in North Carolina introduced an amendment to a local election law that, if it passes, would allow 18 to 20 year olds who are already legal residents of the state to serve on a local government board that oversees elections, once that board has asked their opinion on the issue. The amendment was proposed by a number of local county commissions, two local legislative bodies, and a state representative. It was introduced with the support of the League of Women Voters and a number of state and local associations. What is the issue? North Carolina is one of just 11 states where 18-

Stability analysis and in vitro degradability of biodegradable aliphatic polyesters (PLA, PGA and P(3HB)). The stability behaviour and the in vitro biodegradation of three aliphatic polyesters, poly(lactic acid) (PLA), poly(glycolic acid) (PGA) and the new biodegradable copolymer poly(3-hydroxybutyrate) (P(3HB)) have been investigated. The effect of temperature and pH on the chemical stability of the polymers and the hydrolytic stability of the various degradation products was examined. The variation of molecular weight distribution during degradation was followed by gel permeation chromatography (GPC). Also the susceptibility of the degradation products to methanolysis was studied and the methoxy-group content of the various polymers examined. The chain end composition was studied using gas chromatography (GC). Results of the analysis indicate that: PLA, PGA and P(3HB) exhibit high chemical and hydrolytic stability, they may be produced in large amounts, particularly during biopolymer synthesis in fermenters; The extent of chain end cleavage of PLA and PGA was not dependent on pH and temperature; Only lactic acid and glycolic acid were released from the polymers during degradation by hydrolysis, however a substantial amount of hydrophilic oligomers were also produced.Bob Fitrakis Responds to Rick Perry's Anti-Spirits Campaign As Gov.
