The international ISO standard version of the NVRAM (Version NVRAM/Flash Config) is called.In a development of new connector technology, it has been proposed to utilize a modular plug connector such as disclosed in Japanese Patent Kokai 60-136214 which has a wider contact than conventional connectors. However, it has been found that performance problems can occur when the modular plug contacts are used in this manner. One problem is that signal reflections occur from the front face of the contact which means that the contact will have its peaks shifted toward a positive potential. In particular, a signal waveform indicative of 5 volts at the front face of a contact means that the potential

shifts up to about 6.5 volts. FIG. 4 is a schematic illustration of the circuitry which is associated with the contact. When an input signal waveform is applied to the contact, this signal waveform is buffered by a transformer T and flows through a series of resistor R.sub.B and capacitor C.sub.B to a jack contact 10. It will be seen that the potential of signal waveform V.sub.s is a function of the capacitor C.sub.B and the resistor R.sub.B. More specifically, if V.sub.s is at a high potential, then the capacitor C.sub.B is charged and the potential of signal waveform V.sub.s rises. If, on the other hand, the potential of signal waveform V.sub.s is at a low potential, then the capacitor C.sub.

A: Thanks for interest of your question. The answer to your question is yes, this is perfectly legal. Software development is not a crime. If you would like to know more please open a support ticket and I can get you more information. Q: Как найти позицию и вернуть найденные стили? Можно ли найти позицию html и вернуть в ней выделенный класс? Например, у меня есть такой возможный текст: И для тех, кто знает позицию, например: var rp = \$("p.well"); Как можно вернуть позицию и в ней выделить класс? А если нет, то как можно найти позицию по выделенному классу (к слову, такой стиль нужно на чистом CSS)?
A: Вот пример и почитай про к
