Which was a little bit of a disappointment when I discovered that it's not available yet. I was also told that for Convex 9.3 to support Linux, it had to be reworked completely, and not just ported, which explains the delay. So I decided to download and install the current version, 8.0.2. I knew that I wasn't going to have the latest version, but I also thought that it would at least run without too many problems on my Ubuntu 11.04. As a newbie Linux user, I have very little knowledge about Open Source. What I do know is that you can write your own programs in C/C++ and that the Compilers and Virtual Machine interpreters are free. So I started with the source for Convex. It took me maybe 2 hours or so to download and install the program, and to get it working. Most of that time was spent trying to figure out the differences between Ubuntu 11.04 and the distribution I was using. It was not a pretty sight... I wanted to use CDL as my learning platform, so I set out to learn how to write a simple program in CDL. I followed the tutorial in User Manual but found that the GUI did not respond to my clicks. I created some more programs to see whether there was a solution to this problem. The results were quite odd. I found that the virtual machine was very slow
